

Project: Base Pavement Condition Assessment and Maintenance/Repair Plan

Group Members: Athena Renno, Jacob Stouffer, Karsten Arnold, and Wyatt Warner

Faculty Advisor: Dr. Saha

Area: Transportation Engineering

The base does not have an established plan for the maintenance/repair of pavements. Crack sealing and seal coating were the primary pavement preservation techniques used, however the last effort was 3-5 years ago. Current pavements are in fair condition but are reaching the point where an increased rate of degradation is expected. The project could consider:

- PCI survey of existing pavement
- Development of a future year maintenance and/or repaving plan based upon current condition
