Engineering,
Technology and
Computer Science**

**June 13 – June 24,
2005**

SPICE is an opportunity to learn and sharpen skills in JAVA, one of the most widely used languages for internet and modern application programming.

SPICE I – Mixing fun and hard work, students design, construct, and test a Java-based computer game or simulation.

SPICE II – Advanced or returning students move on to more complex subjects like GUI programming, event programming, user interfaces and abstract classes.

Speakers from the IPFW Department of Computer Science, as well as other community professionals, provided students with information about careers in Computer Science, Programming and Engineering.

SPICE Instructor, Tammy Toscos and SPICE Coordinator, Assistant Professor Emmanuel Udoh recognized students for their outstanding efforts. On the last day of the program, students were also treated to a trip to International Truck and Engine Corporation.
