## OUR THURSDAY MORNING SURPRISE

When the students walked into Kettler Hall Thursday morning they entered dark hallways. A storm the night before had knocked out power to the building. Among the teachers there was mad rush to figure out what to do. We ended up setting up camp in Walb Student Union and works on finishing up balloons, games and cars. Then the students worked on math until lunch time. By lunch Kettler had power. We headed back to continue our regularly scheduled math and science camp!

## ZOOM, ZOOM

It was racing day! The fans were cheering and excitement was riddled through out the classroom. The students were ready to get their cars out on the track! There was distance racing and speed racing. The cars were beautiful! Students had already found the ideal amount of weight to add to their car. The cars, some aerodynamic, some decorative, others unique of their own right, made quite a show!

**SUPERBALLS!** Students mixed up a unique concoction this morning. They made superballs. They mixed and rolled. Out came their very own bouncy ball!

Already excited about their hot

## UP, UP and they're gone!

air balloons, the prospect of making and shooting off water rockets brought great anticipation to the students. Using the 2 liter pop bottles they had brought in, each student designed their own fins and decorated their rockets. All too soon it was time to head out to launch them. After lunch they headed out. Within minutes the first rocket was launched. And so began a hour of launching rockets. Each flew well. Several went very high. One caught the wind and was sent into the river! To follow up the successful rocket launches, the students brought along their hot air balloons in hopes of getting another try at sending them soaring.

On behalf of all the teachers . . .

Thank you and farewell to all the students who joined us this week! It was a pleasure to have each and every student. Keep working hard. You have all done a wonderful job!
