DAYS 3 & 4

Volume III
Issue III
July 12, 2007

Ambulances, Radiology, Surgery, Oh My!

Temperatures were taken, x-rays examined, sleep patterns evaluated, and stitches sewn. This can only mean one thing . . . a visit to the hospital. The uniqueness of this visit was that no student was there to be treated. At least not for injury or problems. St. Joseph Hospital opened their doors on Wednesday to provide the students with an interactive tour of their facilities. Students were able to see what planning takes place for emergencies, how to take care of their lungs, descriptions and pictures of 1st,

2nd, and 3rd degree burns, a pressure chamber, x-ray machines, MRIs, CATs, sleep therapy, and surgical instruments and clothing. It was an eventful day, filled with activities and gracious hosts in every department we visited. The students were even able to have an

impromptu chat with a paramedic. We were treated to lunch and sent off with some souvenirs to remind us of the experiences we had.

Thank you St. Joseph Hospital!

CSI: Environment

Who dunnit? That is the question. Fish are dying, rivers are acidic, and trees are being cut down. Everyone has a story to tell and a suspicious history with the environment. Students are learning how to measure the acidity of liquids and use the stories and facts to determine who is responsible. Students also played a game demonstrating how food, shelter, predators, and changes to the environment affect how animals survive. The amount of vegetation in soil and run off from farms and factories were investigated. Students also came up with solutions to the negative impact each of us can have on the environment.
