## Campers study what makes the lights come on (electricity)!

This morning the campers studied electricity and electrical current. They learned about what a battery does (supplies a push to the charges) and was not a source of

charge. They learned what constituted a complete circuit and what was required to light a bulb.

## Campers puzzle and finish tee-shirts

In the afternoon, the campers completed their tee-shirts and then proceeded with studying shapes and patterns. They were examining drawing three dimensional shapes and working on spatial reasoning.
